

TRI-CITY INATOR

TRADING CHEATSHEET

Updated 2026-05-19 v2 · Paper mode ON · 15-min ORB · github.com/djmusstrd/tri-city-inator

DAILY SESSION FLOW (all times CT)

TIME	ACTION	WHO
Before 7:30 AM	Open TradingView → TRI CITY INATOR III layout	You
Before 7:30 AM	Run tricity in terminal to register crons	You
7:30 AM	Premarket scanner — ranks gap-up candidates, pushes to TV watchlist	Auto
8:30 AM	Symbol swap — top 15 candidates loaded into scanner	Auto
8:45 AM	ORH/ORL lock — signal monitor starts (8:30 + 15 min ORB)	Auto
Every 3 min	Signal check on all 15 symbols — auto-executes qualifying setups	Auto
3:45 PM	EOD close — all open positions exited	Auto

SIGNAL TYPES & ENTRY CONDITIONS

SIGNAL	REQUIRED CONDITIONS	STOP
BREAKOUT	Price > ORH · RSI > 50 · EMA Dev% > 0 · RVOL ≥ 2.0x	13¢ below ORH
CONTINUATION	Price > ORH · EMA Dev% 0% to +1.0% · RVOL ≥ 1.75x	13¢ below ORH
PULLBACK	EMA Dev% 0% to +0.8% · RSI 38–55 (rising) · RVOL ≥ 1.5x	EMA20 – 30¢ (widened stop)

CUP = YES → High-conviction setup. Logged with --cup flag.

POSITION STRUCTURE (50 – 25 – 25)

TARGET	TRIGGER	ACTION	STOP MOVES TO
T1	+10%	Sell 50% of position	Breakeven
T2	+20%	Sell 25% of position	T2 price (locked)
T3	+30%	Trail remaining 25%	Exit on EMA20 + VWAP breach or EOD
STOP	-5%	Sell ALL	—

ENTRY GUARDS (checked in order before every trade)

#	CONDITION	DEFAULT	ACTION
1	Already traded this symbol today	—	BLOCK
2	Already in a position for this symbol	—	BLOCK
3	Too many open positions	3 max	BLOCK
4	Daily loss limit hit	-\$300	BLOCK (circuit breaker)
5	After entry cutoff	1:00 PM CT	BLOCK (POST_CUTOFF alert)
6	SPY down from prior close	-1.5%	BLOCK (bear regime)
7	RVOL below setup floor (see RVOL section)	varies	BLOCK

RVOL RULES

FEATURE	DETAIL
---------	--------

Scanner colors	Red < 1.5x (weak) · Yellow 1.5–2.5x (moderate) · Green ≥ 2.5x (strong)
Setup floors	BREAKOUT 2.0x · CONTINUATION 1.75x · PULLBACK 1.5x
Afternoon tighten	After noon CT → floor = max(setup floor, 2.0x)
Size boost	Linear ramp: 1.5x RVOL = no boost → 3.0x RVOL = +25% position size
Collapse exit	After T1 hit (breakeven set): if RVOL drops below 1.0x → EXIT

POSITION SIZE MODIFIERS (PULLBACK only — stack multiplicatively)

CONDITION	MULTIPLIER	SOURCE
RVOL boost (1.5x → 3.0x)	+0% to +25%	RVOL linear ramp
HTF setup (≥90% in 3 months)	1.0× (bypass all penalties)	Bulkowski HTF: 82% target hit
Hammer candle at EMA	1.0× (no penalty)	Bulkowski: 72% follow-through
Non-hammer candle (NEUTRAL/BEARISH)	× 0.75 (−25%)	Finding 6
Loose consolidation (no CUP)	× 0.85 (−15%)	Bulkowski pennant: 54% failure
Worst case (neutral + no cup)	× 0.637 (−36%)	Both penalties stacked

PREMARKET SCANNER FLAGS (7:30 AM output)

FLAG	COLUMN	MEANING	ACTION
■ PARABOLIC	>10x RVol	Blowoff — extended move, avoid chasing	Excluded from TV top-15
■ 52H	near 52wk	Price within 5% of 52-week high — resistance zone	Caution flag, trade allowed
★ HTF	3mo ≥+90%	High & Tight Flag: +90% in 3 months	--htf passed, no size penalties
↑ SMA↑	SMA50>100	Weinstein Stage 2: SMA50 above SMA100 (rising avg)	+0.08 to score vs flat SMA

SCANNER TABLE COLUMNS (TradingView Pine)

COLUMN	MEANING
SYMBOL	Ticker (exchange prefix stripped for display)
PRICE	Current price on scanner timeframe (15-min)
RSI	RSI-14 on 15-min bars
EMA DEV%	% distance from 21 EMA. 0% to +0.8% = PULLBACK zone. >0 required for BREAKOUT.
RVOL	Current bar volume ÷ 10-bar avg volume
ORH/ORL	Opening Range High / Low — locks at 8:45 AM (15-min ORB)
CUP	20-bar range < 6% AND price within 1% of 20-bar high (tight consolidation)
SIGNAL	BREAKOUT · CONTINUATION · PULLBACK · --- (no signal)

TERMINAL COMMANDS

COMMAND	ACTION
tricity	Start session: open TradingView + Claude, register all crons
tricity-scan	Run premarket scanner manually
tricity-status	Show all open positions

tricity	Today's trade report (P&L, R-multiples)
tricity-all	All-time performance report

Dry-run (no order placed):

```
python -W ignore ~/tri-city-inator/scripts/tri_city_execute.py \  
  --symbol NVDA --price 225.00 --orh 223.16 --orl 218.37 \  
  --rsi 55.0 --ema_dev 0.85 --signal "BREAKOUT" --setup BREAKOUT --dry-run
```

Force EOD close now:

```
python -W ignore ~/tri-city-inator/scripts/tri_city_position_manager.py --eod
```

RESEARCH FINDINGS (Bulkowski + Weinstein)

#	SOURCE	CHANGE	RESULT
1	Bulkowski	Fix B requires 0.5% buffer below entry (PULLBACK_FAIL_BUFFER)	No penny-wick false exits
2	Bulkowski	PULLBACK entry only when EMA Dev% ≥ 0% (price at or above EMA)	Eliminates below-EMA entries
3	Bulkowski	PULLBACK stop = EMA20 – 30¢ (widened from 10¢)	Room through normal noise
4	Bulkowski	Fix B uses last completed bar close, not live tick	Ignores intrabar wicks
5	Bulkowski	Re-entry allowed after Fix B scratch < \$0.50/share	65-70% re-entry win rate
6	Bulkowski	Non-hammer PULLBACK = –25% size · Hammer = full size	72% follow-through on hammers
W1	Weinstein	SMA50 > SMA100 = rising SMA (Stage 2 confirmed) → +0.08 score	Filters flat-SMA breakouts
W2	Weinstein	Within 5% of 52-week high → ■ resistance flag	Caution, not a block
F1	Bulkowski	HTF: ≥90% in 3 months → ★ flag → --htf → bypass size penalties	82% target hit, 15% failure
F2	Bulkowski	No CUP (loose consolidation) → –15% PULLBACK size	Pennant 54% failure rate

.ENV REFERENCE

KEY	DEFAULT	NOTES
ALPACA_PAPER	true	Set to false for live trading
MIN_GAP_PCT	1.5	Minimum gap % to qualify as candidate
FREE_RIDE_PCT	3	Profit % to activate free-ride stop
T3_TRAIL_PCT	5	Trailing stop % for T3
MAX_POSITIONS	3	Max concurrent open positions
DAILY_LOSS_LIMIT	-300	Circuit breaker in dollars
ORB_MINUTES	15	5, 15, or 30. Must match TV scanner timeframe
BREAKOUT_MIN_RVOL	2.0	RVOL floor for BREAKOUT entries
CONTINUATION_MIN_RVOL	1.75	RVOL floor for CONTINUATION entries
PULLBACK_MIN_RVOL	1.5	RVOL floor for PULLBACK entries
RVOL_SIZE_BOOST_MAX	1.25	Max position size multiplier at high RVOL
RVOL_SIZE_BOOST_THRESH	3.0	RVOL level that triggers max boost
RVOL_EXIT_FLOOR	1.0	RVOL collapse exit threshold (post-T1 only)
PM_MIN_RVOL	2.0	Afternoon RVOL floor (after noon CT)
PULLBACK_FAIL_BUFFER	0.005	Fix B: 0.5% buffer below entry before exit fires

EMA_STOP_BUFFER	0.30	Cents below EMA20 for PULLBACK stop
RE_ENTRY_MAX_LOSS	0.50	Max \$/share loss to allow re-entry after Fix B scratch
LOOSE_CONSOL_PENALTY	0.85	Pennant: -15% size on PULLBACK with no CUP (set 1.0 to disable)
